

**PT KONSULTA SEMEN GRESIK**

# **Company Profile**

# Company History

Engineering and design activities within Semen Gresik began in 1980, marked by the project to convert the fuel source of the Gresik Plant II from oil to coal. This step became the initial milestone in the company's efforts to enhance energy efficiency and production capacity.

Entering the period of 1990–1998, Semen Gresik continued its industrial development efforts with the construction of the Tuban I, II, and III Cement Plants. All these projects were executed on a self-managed basis by Semen Gresik's internal experts, who collaborated with local professionals. This success served as tangible proof of the national workforce's capabilities in the field of industrial engineering and design.

Drawing on this experience and competence, and to strengthen its role in developing national capabilities in engineering, procurement, and construction management, PT Konsulta Semen Gresik was officially established on January 30, 1993.

The company was established with the following objectives:

- To optimize the expertise and experience of professional personnel, both from within the Semen Gresik Group and from external specialists.
- To make a tangible contribution to the development of the national industry through reliable design, technical consultancy, and project management services.

To this day, PT Konsulta Semen Gresik provides comprehensive services across the entire industrial project lifecycle, including:

- Planning and Feasibility Studies
- Engineering Design
- Project Management and Construction Supervision
- Provision of Professional Expert Staff
- AI Powered System

With a solid foundation of technical experience and a commitment to quality, PT Konsulta Semen Gresik continues to serve as a trusted partner in sustainable national industrial development.

# Vision

To become Indonesia's leading technology-based engineering services and technical solutions provider, integrating engineering expertise, management, and human resources to drive the national industrial transformation towards a digital and sustainable era.

# Mission

- ✓ **To Strengthen Internal Capabilities**  
To forge strategic collaborations with partners and universities, while enhancing expert competency and efficiency through training and management digitalization.
- ✓ **To Deliver Tangible Added Value**  
To enhance client productivity and sustainability through innovative solutions oriented towards social and environmental responsibility.
- ✓ **To Expand Markets and Strategic Alliances**  
To establish cross-sector partnerships for expanding into the energy and manufacturing industries, as well as international opportunities.
- ✓ **To Foster Diversification and Innovation as a Foundation for Sustainable Business**  
To develop AI, IoT, and data analytics-based solutions that strengthen the engineering, maintenance, and facility management sectors.
